tanglishcaptions.com

TanglishCaptions was built to solve a frustrating **problem** we personally faced as editors and content creators **manually adding Tanglish captions** to short reels **took hours**. As a product studio, we collaborated end to end with **Sanjeev N C**, from idea and MVP to design and technology, while Sanjeev led the launch and marketing.

The product uses AI to generate **highly accurate Tanglish captions in seconds**, exported in creator friendly formats. What earlier took nearly 4 hours can now be done in under 40 seconds. Currently in beta, TanglishCaptions is being tested with 10 early creators as we actively iterate and improve the product.

comealign.com

ComeAlign was built to **retire the blind swipe culture** by enabling **meaningful matches based on zodiac** compatibility rooted in over 10,000 years of astrological research.

Designed for Gen Z and astrology believers, the platform matches people based on the alignment of their stars rather than surface level swipes. As a product studio, we partnered with **Hakeem Awbrey** and delivered the product end to end branding, UI/UX, **Flutter** based mobile app, **Node.js** backend, and **AI** powered matching logic. The product is currently in testing and entering the **launch** phase. ComeAlign is set to go live on the Play Store and App Store soon.

getsupermatched.com

SuperMatch was built to fix the fragmentation in Tamil Nadu's tech ecosystem, where students, founders, service providers, and investors struggle with poor access and cold outreach.

The platform starts with students and uses **AI** powered matching to connect the right people based on intent, skills, and needs. As a product studio, we are **building** the **product** end to end strategy, UX, platform, backend, and AI while partnering with Entrepreneurs of Madras for ecosystem collaboration and operations. SuperMatched brings all stakeholders onto a single, trusted network. Currently in MVP, the platform already has **200+** early users and partner companies.
